Kestrel Retail Group: Acceptable Use of AI Tools

POL-02 | Version 1.0 | Effective 2026-01-01 | Owner: Head of Data Governance

1. Purpose

This policy sets safe use of AI tools, including chat assistants and internal RAG assistants, at Kestrel.

2. Approved tools

Only tools on the approved list published by the Head of Data Governance may be used with company data.

3. Data rules

Public and Internal data may be used with approved tools. Confidential and Restricted data (see POL-03) must never be entered into public AI tools. Customer-level data must not leave approved systems.

4. Answers about KPIs

An AI assistant that answers KPI questions must cite the governed source document for every answer, must state the certification level of the KPI, and must say it does not know when the answer is not in the governed documents.

5. Human review

AI output used in board packs or external communication must be checked by a person, who stays accountable for it.
